1st Grading Period

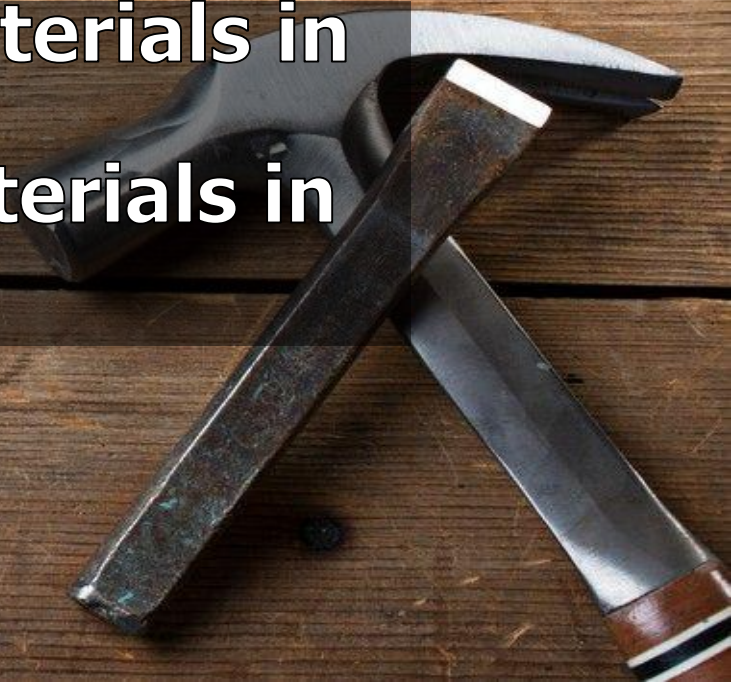

CARPENTRY 9

Tools and Materials Used in Project Making

- Identify the different tools and materials in carpentry.
- Present the different tools and materials in carpentry and use them safely.

The background of the image consists of several horizontal wooden planks. The wood has a natural, aged appearance with varying shades of brown, from light tan to dark, almost black, tones. There are visible grain patterns, knots, and some surface wear or staining. The planks are arranged in a slightly irregular, stacked manner, creating a textured, rustic look.

Tools and Materials Used in Project Making

Crosscut Saw

- **This saw is used for making rough cuts of wood and is designed to cut across the grain of the wood (i.e., perpendicular to the grain).**

Jigsaw

- **A jigsaw is a handheld power tool that can make both straight and curved cuts. It has a downward pointing blade that is guided along by an upper handle.**

Claw Hammer

- **A claw hammer is a type of hammer used mainly for pounding nails, or extracting nails from wood.**

Level Bar

- **device for establishing a horizontal plane. It consists of a small glass tube containing alcohol or similar liquid and an air bubble; the tube is sealed and fixed horizontally in a wooden or metallic block or frame with a smooth lower surface.**

Carpentry Square

- in measurement, device consisting of two straightedges set at right angles to each other. It is used by carpenters for checking the correctness of right angles, as a guide when drawing lines on materials before cutting, or for locating holes.

Pull push Rule

- **A pull push rule is a measuring tape that coils into a compact case. It is used for measuring long, short, straight lengths.**
